All the activities mentioned above lasted a total of 13 hours and attracted 93 participants. We can consider that we disseminated the results of this project to all the indicated target groups. The presentations and workshops were met with great interest from participants. Industry representatives were particularly interested in how universities and companies operated under wartime conditions. Teachers, including those from abroad, asked many questions about new teaching methods and ways to improve the quality of teaching. Students participating in the workshops were highly engaged in performing the experiments developed by the project partners. We can assume that almost 100% of participants were satisfied with these events.
